ENTERTAINMENT PURSUIT

How to help user find fun events nearby

1. Search events by desired keyword
2. Add favorites
3. Click on events to learn more
4. Purchase tickets if desired

TEAM WORK IS HARD

Divide and conquer will not work unless there is a clear communication

WHAT HELPED:

- Github
- Slack
- Patience
- Willingness to work hard

TECHNOLOGIES USED

- HTML5, CSS3, JavaScript
- Bootstrap, Font Awsome, Google Fonts
- Firebase
- Google Maps API
- Google Places API
- Ticketmaster API
- Prezi.com

New: Masonry.js

TICKETMASTER.JS

Makes AJAX call to Ticketmaster API that returns the top 20 upcoming events in that genre. The objects are then displayed to show the name of the event and buttons are created to favorite or click to the event url for more information.

GOOGLE MAPS & GOOGLE PLACES API

Firebase

- Learn how to use authorization from Firebase
- Able to sign up with email/gmail
- Learn to use Firebase storage

THANK YOU!

Any questions?
